

AI computing server equipment

Overview

These servers are specifically designed for AI, machine learning, and high-performance computing (HPC), ensuring top-notch performance and reliability. AI supercomputers are built from finely-tuned hardware with countless processors, specialized networks and vast storage. Artificial Intelligence (AI) server manufacturers have experienced surging demand as data center operators require significantly more computing power than before the advent of ChatGPT and other Generative Artificial Intelligence (Gen AI) tools. Enterprises are investing billions of dollars in cloud. Local deployment offers faster iteration, lower latency, full control, predictable costs, and secure data. GPU: NVIDIA RTX PRO Blackwell (96 GB VRAM, 5th-gen Tensor Cores) for training/inference; rack-ready for 2U-4U servers. Get AI models and tools such as DeepSeek or Ollama running on our dedicated GPU servers and tag us on Hugging Face for a shout-out of your favorite Projects. Some enterprises look for the very latest models, while others achieve the same results by selecting proven, widely available refurbished systems at a lower cost. AI servers: Why choose ASUS?

ASUS excels in.
