

Are outdoor and indoor fiber optic cable prices the same

Article Overview

Outdoor fiber optic cables generally cost more than indoor cables due to their rugged construction, protective materials, and installation requirements.

Cost Overview

Indoor fiber optic cables are designed for controlled environments, such as inside buildings or data centers. They prioritize flexibility, compactness, and fire safety, often using aramid yarn (Kevlar) as a strength member and meeting plenum or riser fire ratings. Typical indoor cables, such as G.657 tight-buffered or multimode fibers, can be more expensive per foot for small-scale, high-performance applications due to these specialized materials and safety standards. Outdoor fiber optic cables, on the other hand, are engineered to withstand harsh environmental conditions, including UV exposure, moisture, temperature fluctuations, and physical stress. They often include metal armor, double sheaths, water-blocking materials, and thicker jackets, which increase durability for long-distance transmission. Outdoor cables are commonly single-mode (G.652) and can range from 12 to 288 cores, with costs rising for higher fiber counts.

Price Comparison

- **Material Costs:** Retail prices for fiber optic cables range from \$1 to \$6 per foot, depending on fiber count and type. Outdoor cables tend to be at the higher end due to additional protective layers and armoring ...
