

Bus trunking connector specifications

Article Overview

Bus trunking connectors are designed to safely join busbar trunking sections, supporting rated currents from 25 A up to 6300 A, with IP protection from IP55 to IP68, and comply with IEC 61439-6 standards.

Electrical Ratings

Bus trunking connectors are rated according to the system they serve:

- Low to medium currents: 25–160 A for small workshop or building loads (BD01 system)
- Medium currents: 160–1250 A for industrial or medium-size building loads (BD2 system)
- High currents: 800–6300 A for large infrastructure or industrial applications (LI and LD systems)
- Rated operating voltage typically aligns with the busbar system, often up to 690 V AC for low-voltage applications .

Mechanical and Construction Features

- Connectors are designed for plug-in or feeder connections, allowing safe and rapid assembly .
- Standard busbar trunking systems use 4 conductors (L1, L2, L3, N+PE), with optional 5-conductor versions including a separate neutral .
- Conductors are PVC insulated or encapsulated in resin for high protection (IP68) in extreme environments
