

Cable tray bends through walls

Article Overview

Cable tray bends through walls can be achieved using pre-fabricated bends, cable tray benders, or on-site modifications with tools like bolt cutters or metal bars, depending on the tray type.

1. Pre-Fabricated Bends

For standard installations, the easiest method is to use pre-fabricated 90° or 45° bends designed for the specific cable tray system. These bends are manufactured to fit the tray dimensions and maintain structural integrity, ensuring safe cable support through walls or corners ().

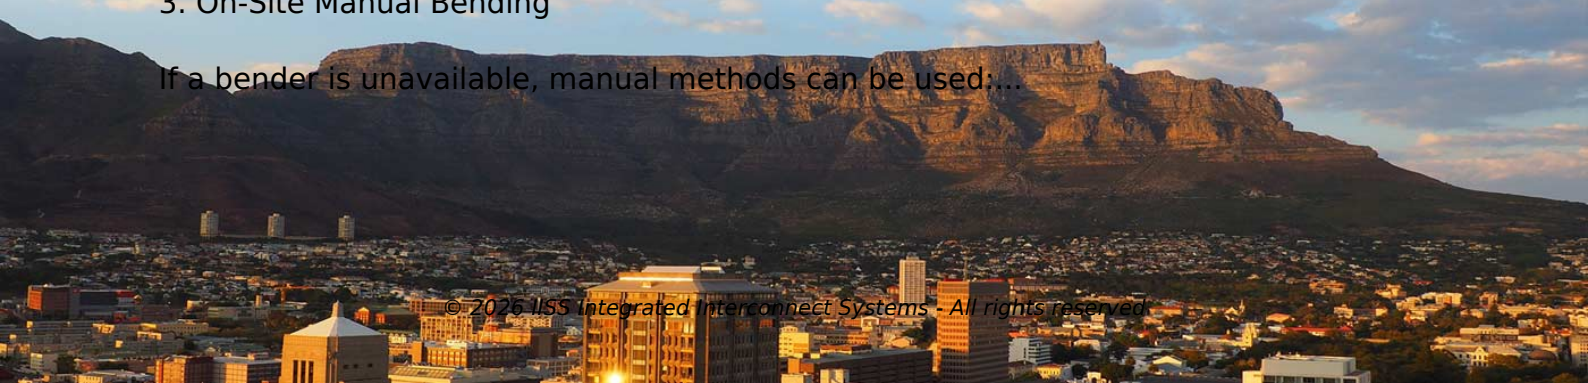

2. Using a Cable Tray Bender

For steel or solid-bottom trays, a cable tray bender is commonly used:

- Inspect the tray for damage and clean it to remove debris or moisture ().
- Measure and mark the desired bend location and angle.
- Use a bender appropriate for the tray size and material to create a smooth, accurate bend.
- Ensure the bend does not deform the tray edges, which could compromise cable support ().

3. On-Site Manual Bending

If a bender is unavailable, manual methods can be used:...
