

Cable tray dimensions in Malaysia

Article Overview

Standard cable tray lengths in Malaysia typically range from 2.44 meters (8 feet) per section, with options for various widths and materials to suit industrial and commercial installations.

Standard Lengths and Sizes

In Malaysia, most cable trays are supplied in standard lengths of 2.44 meters (8 feet) per section, which is common for both perforated and solid-bottom trays . Widths vary depending on the number and size of cables, typically ranging from 100 mm to 600 mm or more, and trays are designed to accommodate future expansion by adding 25–40% spare capacity .

Materials and Types

Cable trays are available in multiple materials to suit different environments:

- Hot Dipped Galvanized (HDG) steel for corrosion resistance
 - Marine Grade Stainless Steel for harsh or coastal conditions
 - Aluminium for lightweight applications
 - Powder-coated or painted finishes for aesthetic or protective purposes
- Trays can be perforated for better ventilation and heat dissipation or solid-bottom for extra protection against dust and moisture .
