

Cable tray molding equipment

Article Overview

A cable tray molding device is used to shape, form, or route cable trays and raceways for organized cable management in residential, commercial, and industrial installations.

Overview

A cable tray molding device refers to equipment or systems designed to form, shape, or guide cable trays and raceways. These devices are essential for creating structured pathways for electrical, data, and control wiring, ensuring safety, accessibility, and efficient space utilization. They are used in both surface-mounted raceways and industrial cable tray systems.

Types and Applications

1. Surface-Mount Cable Molding Devices These are compact raceway systems that conceal wiring along walls or ceilings where internal wall access is limited. They often feature:

- Slide-on or snap-on covers for easy access to cables
 - PVC or adhesive-backed options for low-voltage applications
 - Compatibility with standard outlet boxes and wire retention clips for secure installation
2. Cable Tray Production Line Devices For industrial-scale applications, cable tray molding devices are part of automated production lines that form metal cable trays. Key features include:
- Roll forming and CNC punching modules to create precise bridge structures with ventilation holes for heat dissipation
 - Servo motor-controlled feeding systems for continuous, high-precision operation
 - PLC-based control panels for monitoring, parameter setting, and fault diagnosis
 - Customizable dimensions: width 50–1200mm, thickness 0.4–2.0mm, height 20–150mm
3. Wire Basket Cable Tray Systems Wire basket systems, often used in data centers and industrial facilities, provide:
- Lightweight welded steel mesh construction for high strength-to-weight ratio
 - Larger openings to reduce cutting during installation
 - Multiple standard widths and mounting options for flexible deployment
 - Environmental benefits with recycled steel content
