

Cable trays come in several structures

Article Overview

Cable trays consist of straight sections, fittings, supports, covers, and accessories that together form a complete cable management system.

Main Components

Straight Sections: These are the long, linear parts of the tray that form the primary pathway for cables. They are available in various lengths and types, such as ladder, trough, or wire mesh, depending on ventilation and protection needs. **Fittings:** Fittings allow the cable tray system to navigate around obstacles and branch out. Common fittings include:

- **Horizontal Bends:** Change direction on the same plane (e.g., 30°, 45°, 90°)
- **Vertical Bends (Risers):** Move the tray between different elevations
- **Tees and Crosses:** Create branches for routing cables to multiple areas
- **Reducers:** Connect trays of different widths for main-to-branch transitions
- **End Closures:** Seal the ends of trays to protect cables
- Supports:** These elements anchor the tray to the building structure and maintain stability. Examples include:
 - **Wall Brackets**
 - **Trapeze Hangers**
 - **Center-Span Supports**
 - **Suspended Supports**
- Covers and Protection Accessories:** Covers protect cables from dust, debris, moisture, and unauthorized access. Additional accessories include:
 - **Splice Plates:** Connect straight sections securely
 - **Hold-Down Clamps:** Secure covers to the tray base
 - **Drop-Outs:** Allow cables to exit vertically to equipment below...
