

Can an indoor fiber optic cable be connected to a switch

Article Overview

Yes, an indoor fiber optic cable can be connected to a network switch using the appropriate SFP modules or media converters.

How It Works

Fiber optic cables transmit data as light pulses, unlike copper Ethernet cables that use electrical signals. Therefore, a direct connection to a standard RJ45 Ethernet port is not possible. To connect fiber to a switch, you need either:

- SFP (Small Form-factor Pluggable) or SFP+ modules: These modules plug into the switch's optical ports and match the fiber type (single-mode or multimode) and speed (1G for SFP, 10G for SFP+) .
- Media converters: These devices convert optical signals from the fiber into electrical signals compatible with RJ45 Ethernet ports .

Connector Types

Common fiber connectors include:

- LC (Lucent Connector): Compact, push-pull design, widely used in high-density setups .
- SC (Subscriber Connector): Square body with snap-in coupling, secure and reliable .
- ST (Straight Tip): Bayonet-style, often used in industrial environments
