

Can cable trays be sealed up

Article Overview

Cable trays should be sealed using fire-rated materials and proper installation techniques to ensure safety, prevent fire spread, and maintain structural integrity.

Firestopping and Penetration Sealing

When cable trays pass through walls, floors, or slabs, all openings must be tightly sealed with firestopping materials such as fire-rated boards, firestop packs, firestop mastic, or fire-resistant mineral wool . For large openings, a fire-resistant backing plate should be installed before sealing. The seal must be tight and reliable, without visible cracks or voids, and all gaps inside and around metal trunking must be completely filled both internally and externally . Cover plates should be square, evenly painted, and properly dimensioned to close the opening securely.

Material Selection

- Firestop packs: Place in an orderly sequence, ensuring the gap area between packs and cables does not exceed 1 cm², with a minimum packing thickness of 24 cm .
- Mineral wool with fire-retardant coating: Often used in soft penetration seals, with thickness adjusted according to cable type and number of cable groups .
- Firestop mastic: Applied to fill small gaps and ensure a continuous seal around cables and trays .

Installation Considerations

- Maintain adequate spacing between cables to prevent heat accumulation and allo...
