

China Netcom fiber optic cable directly connected to router

Article Overview

You cannot connect a standard router directly to a China Netcom fiber optic cable; an Optical Network Terminal (ONT) is required to convert the fiber signal into Ethernet for your router.

Why Direct Connection Isn't Possible

Fiber optic cables transmit data as light signals, whereas standard routers operate with electrical Ethernet signals. Directly plugging a fiber cable into a router will not work because the router cannot interpret optical signals .

Required Equipment

- Optical Network Terminal (ONT) or Optical Network Unit (ONU): Provided by China Netcom, this device converts the incoming fiber optic light signal into an Ethernet signal that your router can use .
- Ethernet Cable: Connects the ONT's Ethernet port to your router's WAN port.
- Compatible Router: Any standard router with a WAN port can be used once the ONT converts the signal .

Step-by-Step Connection

- Locate the Fiber Entry Point: Identify where the China Netcom fiber line enters your home.
- Connect Fiber to ONT: Plug the fiber optic cable into the ONT's designated optical port. Handle the connector carefully to avoid damage or dirt
