

Circuit breaker distribution box configuration small

Article Overview

A small distribution box typically includes a main breaker, branch MCBs, an RCD/RCCB, busbars, and proper grounding to safely distribute power to multiple circuits.

Key Components

- **Main Breaker (Main MCB or Isolator):** Acts as the primary disconnect for the entire system, allowing you to cut off all power during maintenance or emergencies. In small residential setups, a double-pole MCB is commonly used for single-phase 230V or 110/120V systems, rated around 63A for domestic use .
- **Branch Circuit Breakers (MCBs):** Protect individual circuits such as lighting, sockets, or appliances. Single-pole MCBs are used for standard loads, while double-pole MCBs may be used for special or high-power loads .
- **Residual Current Device (RCD/RCCB):** Provides protection against electric shock and leakage currents. Typically rated at 30mA for domestic installations. The RCD is connected downstream of the main breaker, and branch MCBs are connected to its output
