

Common Specifications and Dimensions of Ladder-Type Cable Trays

Article Overview

Ladder-type cable trays are standardized in terms of side rail height, internal width, rung spacing, and section length, with variations depending on load capacity and material type.

Standard Dimensions

Side Rail Heights: Ladder trays are classified by side rail height, which determines load capacity and support span. Typical heights include 65 mm (NEMA 1), 93.5 mm (NEMA 2), 131 mm (NEMA 3), and 150 mm (NEMA 4) for heavy-duty applications . Other manufacturers may offer heights ranging from 50 mm to 120 mm depending on design and coating .

Internal Widths: Standard internal widths are typically 150 mm, 300 mm, 450 mm, and 600 mm, allowing for modular cable installation and consistent spacing across projects .

Rung Spacing: The distance between rungs is generally 150 mm, 225 mm, 300 mm, or 333.3 mm center-to-center, with ventilated openings not exceeding 51-52 mm to ensure proper cable support and ventilation .

Section Lengths: Standard straight sections are commonly 3 m and 6 m, with extended lengths of 9.1 m and 12.2 m available for long-span installations. Non-standard lengths can be custom ordered .

Material and Construction

Ladder trays are typically fabricated from steel, aluminum, or fiberglass-reinforced composites. Steel trays may be hot-dip galvanized, bare, or powder-coated for corr...
