

Comparison of Cambodian Corrugated Cable Fiber IK10 with Imported Brands

Article Overview

Cambodian corrugated fiber optic cables with IK10 ratings offer robust mechanical protection, but imported brands often provide higher consistency, advanced materials, and broader environmental certifications.

Mechanical and Impact Resistance

Cambodian corrugated fiber cables designed to meet IK10 standards are engineered to withstand mechanical impacts up to 20 joules, equivalent to a 5 kg hammer dropped from 40 cm, ensuring protection against accidental impacts and vandalism in industrial or outdoor environments (IEC 62262 standard) . Imported brands, such as those from Germany, India, and Belgium, often incorporate precision-engineered interlocking armor and LSZH (Low Smoke Zero Halogen) jackets, providing additional mechanical durability, UV resistance, and flame retardancy .

Material and Environmental Performance

Local Cambodian cables typically use corrugated steel or aluminum armor with flame-retardant jackets suitable for indoor/outdoor deployment. Imported cables frequently feature gel-free loose tube designs with water-swellable yarns, which enhance environmental durability and simplify installation while reducing the risk of water ingress . LSZH compounds in imported cables prevent toxic gas emission during fires, a feature that may vary in locally produced cables depending on manufacturer standards
