

# Computer Room Switching Power Supplies and Display Cabinets

## Article Overview

Switching power supplies and display cabinets in computer rooms rely on PDUs and intelligent power distribution cabinets to deliver reliable, monitored, and remotely controllable power to IT equipment.

### Power Distribution Units (PDUs)

PDUs are specialized devices that distribute electrical power from a single input source to multiple output outlets within server racks or network cabinets. They are essential for ensuring clean, stable power to servers, switches, and storage devices while enabling monitoring, load balancing, and remote control of connected equipment .

### Types of PDUs

- Basic PDUs: Provide simple power distribution without monitoring or switching, ideal for cost-effective setups .
- Metered PDUs: Include local meters to monitor current and load, helping prevent overloads .
- Monitored PDUs: Allow remote monitoring of power consumption and branch circuits, enabling proactive management .
- Switched/Intelligent PDUs: Offer per-outlet switching, remote rebooting, scheduled power cycling, and detailed energy monitoring .

### Installation Options

- Horizontal PDUs: Mounted inside the rack, occupying 1U-2U space, suitable for smaller racks .
- Vertical PDUs (0U): Mounted along the rack posts, saving rack space while providing up to 40 outlets .
- Custom PDUs: Tailored to specific power requirements, high-density racks, or unique configurations .

### Switching Power and Distribution Cabinets

Power distribution cabinets, such as the Liebert RXV or TFX series, provide dense, configurable power distribution in compact footprints. They can handle 50-300 kVA...
