

Connecting the fiber optic port of the switch to a 100Mbps Ethernet port

Article Overview

To connect a fiber optic port on a switch to a 100Mbps Ethernet port, you need a 100BASE-FX SFP transceiver or a media converter to bridge the optical and electrical signals.

Understanding the Components

Fiber Optic Cable: Fiber transmits data using light, allowing longer distances and immunity to electromagnetic interference. For 100Mbps connections, multimode fiber is commonly used for distances up to 2 km, while single-mode fiber supports longer runs . **100BASE-FX SFP Transceiver:** This is a 100Mbps Fast Ethernet optical module that converts electrical Ethernet signals into optical signals and vice versa. It operates at 1310nm wavelength and supports full-duplex communication over multimode fiber . **Media Converter:** If your Ethernet device lacks an SFP port, a media converter can convert the fiber optic signal to a standard RJ45 Ethernet signal compatible with 100Mbps ports . **Switches:** Some switches have built-in SFP ports, allowing direct fiber connections. If not, a media converter is required to interface with standard Ethernet ports .

Step-by-Step Connection Process

- **Select Compatible Hardware:** Ensure the fiber type (single-mode or multimode) matches the SFP or media converter specifications. For a 100Mbps Ethernet port, use a 100BASE-FX SFP or a 100Mbps media converter .
- **Prepare Fiber Optic Cable:** Use pre-terminated fiber cables with LC or SC connecto...
