

Customized Optical Module Pricing for Communication Equipment

Article Overview

Custom optical modules for communication equipment typically range from \$50 to several hundred dollars per unit, depending on specifications, technology, and order volume.

Price Factors

- Data Rate and Form Factor Modules supporting higher speeds (e.g., 400G, 800G) or advanced form factors like QSFP-DD or OSFP generally cost more than standard SFP/SFP+ modules due to complex design and higher-performance components .
- Technology Type
 - Multi-mode modules (short-range) are usually less expensive.
 - Single-mode modules (long-range) and silicon photonics-based modules are more costly due to advanced chipsets and packaging technology .
- Customization Level Fully custom modules—tailored for specific connectors, wavelengths, or compatibility with proprietary systems—can increase costs. Suppliers like FS and COBTEL offer custom transceivers with options for data rate, connector type, and form factor, often including warranties and testing .
- Order Volume Bulk orders or factory-direct purchases can significantly reduce per-unit costs. Wholesale suppliers often provide competitive pricing for OEM or distributor orders .
- Additional Features Features such as low power consumption, hot-pluggable design, extended link length, or integrated FEC support can also affect pricing
