

Direct Burial Price of Optical Cable

Article Overview

Direct burial fiber optic cable typically costs between \$1 and \$50 per linear foot, depending on cable type, fiber count, armor, and installation complexity.

Cost Overview

The price of direct burial optical cable varies widely due to several factors:

- **Cable Type and Fiber Count:** Single-mode fiber is more expensive than multimode, and higher fiber counts (e.g., 72, 144, or 432 fibers) increase cost due to more material and manufacturing complexity .
- **Armor and Jacket:** Direct burial cables require armored construction for rodent and crush protection, as well as thicker, water-resistant jackets, which raise the price compared to standard outdoor duct cables .
- **Installation Method:** Costs increase with trenching, plowing, or other underground installation methods. Labor, terrain, and local permitting also affect per-foot pricing .
- **Regional Variations:** Labor and permitting costs vary by region. For example, the Northeast tends to have higher per-foot costs, while the Midwest is moderate, and the Southeast shows a wider range due to climate and terrain .

Typical Pricing

- **Per Foot:** \$1 to \$50 per linear foot, depending on cable type, fiber count, and installation complexity .
- **Per Mile:** Underground commercial installations generally range from \$5,000 to \$20,000 per mile, while aerial installations can cost \$40,000 to \$60,000 per mile
