

Distribution box concealed installation

Article Overview

A concealed distribution box should be installed flush within the wall, securely fixed, properly grounded, and wired according to safety standards, with no gaps around the edges and clear labeling for all circuits.

Site Selection and Preparation

For concealed installation, choose a dry, well-ventilated, and accessible location close to the power supply to minimize voltage drop and ensure safety . Avoid humid, corrosive, or poorly ventilated areas to prevent overheating and equipment damage . The installation height is typically 1.5 to 1.8 meters from the floor, which allows convenient operation and inspection .

Fixing the Distribution Box

The box must be firmly fixed to prevent movement or tilting. For concealed installations, this often involves embedding the box into the wall and filling the gap between the box and wall with concrete or plaster. Ensure the box is level and vertical, with a vertical deviation of no more than 3mm . Apply anti-corrosion paint to the contact surfaces between the box and the wall to protect against moisture and rust .

Wiring Specifications

- Turn off the power before starting any wiring .
- Use high-temperature resistant copper wires with cross-sectional areas suitable fo...
