

Electrical Distribution Box Component Library

Article Overview

A distribution box component library includes all essential internal and external parts of a DB box, available as CAD/BIM models for design and engineering purposes.

Key Components of a Distribution Box

A typical distribution box (DB box) is a low-voltage electrical enclosure that safely distributes power from a single input to multiple circuits. Its main components include:

- Main Switch/Isolator: Allows safe disconnection of the entire box for maintenance or emergency purposes .
- Miniature Circuit Breakers (MCBs): Protect individual circuits from overloads and short circuits .
- Residual Current Circuit Breakers (RCCBs): Detect phase-to-neutral imbalances to prevent electric shocks .
- Bus Bars: Metal strips that conduct electricity and serve as central connection points for all circuits .
- Neutral and Earth Bars: Provide return paths and grounding for safety .
- Surge Protective Devices (SPDs): Protect against voltage spikes from lightning or faults .
- Indication Lights: Show mains power status and operational conditions .
- Enclosure: Made from thermoplastics (PC, ASA) or powder-coated stainless steel, protecting internal components from dust, moisture, and physical damage
