

Emergency switch alarm

Article Overview

An emergency alarm switch is a safety device designed to quickly activate alarms or emergency systems, alerting personnel and triggering safety protocols in critical situations.

Overview

An emergency alarm switch is a manually operated or automated device used to initiate an alarm in case of fire, security breach, or other emergencies. These switches are commonly installed in commercial, industrial, and public buildings to provide immediate notification and facilitate safe evacuation or emergency response .

Types of Emergency Alarm Switches

- **Push-Button Stations:** Simple devices that activate alarms when pressed. They may include tamper-resistant covers to prevent accidental activation and often produce an audible alert when accessed . Examples include Federal Signal PS Series Push Button Stations .
- **Fire Alarm Call Points:** Typically rectangular or square units that trigger fire alarms when pressed or broken. They are designed for durability and reliability in high-traffic areas .
- **Emergency Shut-Off Switches:** Used to cut power to machinery or equipment in emergencies, preventing accidents or further hazards .
- **No-Touch or ADA-Compliant Switches:** Designed for accessibility and hygiene, allowing activation without physical contact
