

Explosion-proof methods for optical cable splicing

Article Overview

Optical cable splicing in hazardous areas requires explosion-proof enclosures, certified splicing equipment, armored or conduit-protected cables, and compliance with NEC, ATEX, IECEx, or SAE AS6479/1 standards.

Certified Splicing Equipment

For aerospace and industrial applications in flammable or explosive atmospheres, fiber optic fusion splicers must meet SAE AS6479/1 Type I standards, ensuring safe operation with virtually no insertion loss in hazardous environments . These splicers are designed to prevent ignition sources and are suitable for environments classified as potentially explosive.

Explosion-Proof Enclosures

Splice points and connectors must be housed in explosion-proof enclosures. Examples include the BXJ93 Fibre Optic Splice Box, certified to Ex op pr IIC T6 Gb or Ex op pr db eb IIC T5 Gb / Ex tb IIIC T80°C/T95°C Db, suitable for Zone 1 and Zone 2 hazardous areas . Enclosures should be made of robust materials like stainless steel or carbon steel, rated IP66 for dust and water ingress, and allow flexible cable entry and internal splice tray configuration.
