

Features of Grenada Fiberglass Cable Trays

Article Overview

Grenada Fiberglass Cable Trays are lightweight, corrosion-resistant, non-conductive, and highly durable, offering superior strength-to-weight ratio and long-term reliability in harsh environments.

Material and Construction

Grenada Fiberglass Cable Trays are made from Fiber Reinforced Polymer (FRP) or Glass-Reinforced Polymer (GRP) composites, produced using pultrusion technology for consistent quality and strength . They are available in polyester and vinylester resin systems, with a resin-rich surface veil that provides enhanced corrosion resistance and UV protection . These trays are designed to withstand chemical attack, moisture, saltwater, and extreme weather conditions, making them ideal for offshore platforms, chemical plants, oil refineries, and water treatment facilities .

Mechanical and Electrical Properties

- **Lightweight yet strong:** FRP trays weigh approximately one-third of steel trays while maintaining equal or superior load capacity .
- **High strength-to-weight ratio:** Ensures easy handling, reduced installation effort, and lower transportation costs .
- **Non-conductive and non-magnetic:** Reduces electrical shock hazards and is transparent to radio waves, radar, and microwaves .
- **Impact resistant:** FRP trays resist deformation under mechanical stress
