

Fiber Optic Cable Wrapped Tube Rack-Mounted CE Certification

Article Overview

CE certification for fiber optic rack-mounted systems ensures compliance with EU safety, environmental, and performance standards, including CPR, RoHS, and REACH directives.

CE Certification Overview

CE marking is mandatory for placing fiber optic products on the European market, confirming conformity with all relevant EU directives and regulations . For rack-mounted fiber optic systems, such as wrapped tube distribution panels or patch panels, CE certification covers:

- Safety and electrical compliance under the Low Voltage Directive (LVD 2014/35/EU)
- Electromagnetic compatibility under the EMC Directive (2014/30/EU)
- Fire performance for construction-related installations under the Construction Products Regulation (CPR 305/2011/EU)

Applicable Standards

- Construction Products Regulation (CPR)
- Applies to fiber optic cables used in buildings or civil engineering works.
- Harmonized standard EN 50575 defines fire performance classes (Aca to Fca) based on heat release, smoke density, and acidity .
- Rack-mounted systems with passive fiber components, such as splice modules or distribution cabinets, must comply with CPR and have a Declaration of Conformity.

- RoHS Compliance (Directive 2011/65/EU)
- Restricts ten hazardous substances in electrical and electronic equipment.
- Ensures that connectors, housings, and coatings meet strict material thresholds .

- REACH Regulation (EC 1907/2006)
- Focuses on chemical safety and the use of substances of very high concern (SVHC) in the production chain .

- ISO/IEC 11801
- Defines technical minimum requirements for attenuation, material quality, and system compatibility in FTTH and data center networks
