

Fiber Optic Distribution Box Height Specifications

Article Overview

Fiber optic distribution boxes typically range from 200 mm to 600 mm in height, depending on capacity and mounting type.

Overview

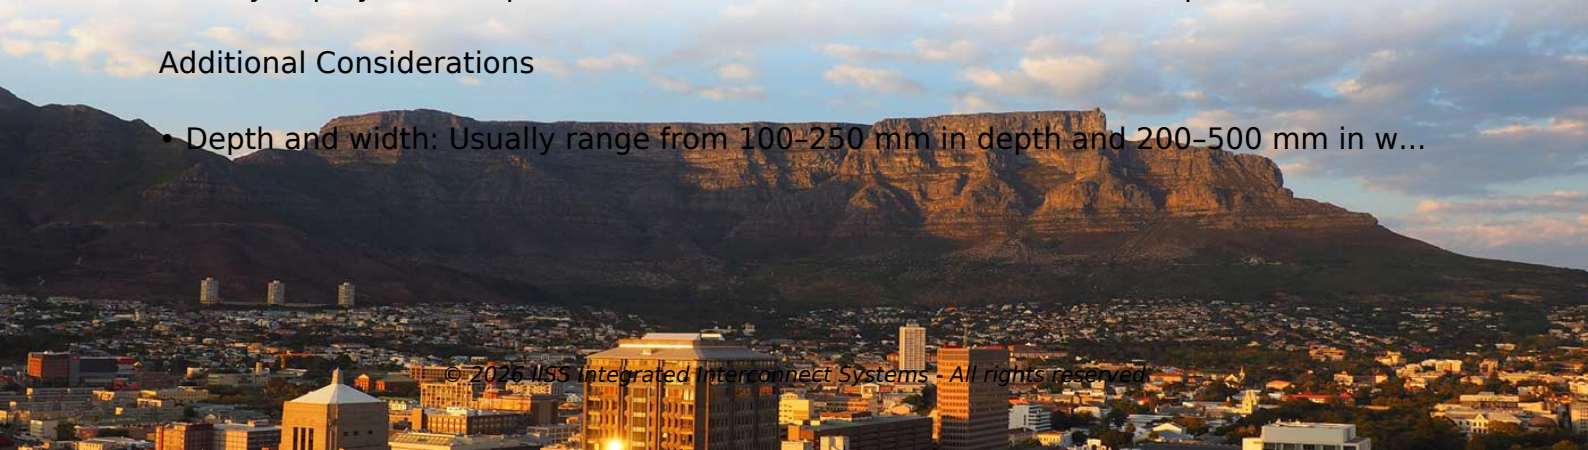

Fiber distribution boxes (FDBs) are enclosures used to terminate, splice, and distribute optical fibers in FTTH, FTTB, and other optical networks . They can be wall-mounted, pole-mounted, or installed inside cabinets, and their height depends on the number of fiber ports, splice trays, and additional components like PLC splitters or slack storage .

Typical Heights

- Small indoor wall-mounted FDBs: Usually 200–300 mm tall, designed for low-density applications (8–24 fiber ports) and compact indoor spaces .
- Medium to large wall-mounted FDBs: Typically 300–500 mm tall, supporting 24–96 fiber ports with multiple splice trays and space for cable management .
- Outdoor or cabinet-style FDBs: Can reach up to 600 mm or more, especially for high-density deployments (up to 288 fibers) and additional environmental protection .

Additional Considerations

- Depth and width: Usually range from 100–250 mm in depth and 200–500 mm in w...
