

Fiber Optic Heat Shrink Tube Box

Article Overview

A Fiber Optic Heat Shrink Tube Box stores and organizes heat shrink tubes that protect fiber optic splices, providing mechanical strength, environmental protection, and easy identification.

Overview of Fiber Optic Heat Shrink Tubes

Fiber optic heat shrink tubes, also called fiber splice tubes or fusion protection tubes, are designed to safeguard optical fiber splices. They are typically made from cross-linked polyolefin with a hot-melt inner layer and a stainless-steel strength member. When heated, the outer tube shrinks, the inner layer melts to seal the splice, and the steel rod reinforces the fiber, restoring mechanical strength without affecting optical performance. These tubes are moisture-resistant, flame-retardant, and available in single-fiber or ribbon fiber versions, with customizable colors for easy identification.

Features and Benefits

- **Mechanical Protection:** Prevents bending or breaking of bare fibers at splice points.
- **Environmental Protection:** Shields splices from dust, moisture, and other contaminants.
- **Optical Performance Preservation:** Maintains signal integrity while providing a rigid protective layer.
- **Ease of Installation:** Clear sleeves allow visual inspection before shrinkage, and rapid heat application ensures quick setup.
- **Customizable Options:** Available in various lengths, diameters, and colors to suit different network requirements
