

Fiber Optic Router Firmware Upgrade Steps

Article Overview

Upgrading your fiber optic router firmware involves identifying your router, accessing its interface, checking for updates, downloading the correct firmware, and safely installing it.

Step 1: Identify Your Router Model

Locate your router's model number, usually printed on a label on the bottom or back of the device. This information is essential for downloading the correct firmware version from the manufacturer's website or app interface .

Step 2: Connect to the Router

For stability, use a wired Ethernet connection to your router. This reduces the risk of disconnection during the update process. Ensure your computer or mobile device is on the same network as the router .

Step 3: Access the Router Interface

Open a web browser and enter your router's IP address in the address bar. Common addresses include 192.168.0.1, 192.168.1.1, or 10.0.0.1. Log in using your administrator credentials. If you haven't changed them, the default is often "admin" for both username and password
