

Fiber Optic Storage Box Fiber Optic Distribution Box

Article Overview

A fiber optic distribution box is a protective and organizational unit for terminating, splicing, storing, and distributing optical fibers in both indoor and outdoor networks.

Purpose and Function

Fiber optic distribution boxes, also called fiber optic termination boxes, serve as central points for managing optical fibers. They terminate, splice, and organize fibers, ensuring efficient connections between network components such as switches, routers, and customer premises equipment (CPE) while protecting delicate fibers from environmental damage and mechanical stress . They are essential in FTTH, FTTx, and data center deployments.

Types and Installation

- Indoor Wall-Mount Boxes: Compact units for limited indoor spaces, ideal for apartments, offices, or telecom rooms.
- Rack-Mount Boxes: Designed for standard 19-inch racks in data centers, supporting high-density fiber connections.
- Outdoor Boxes: Weather-resistant units for aerial or underground installations, protecting fibers from moisture, dust, and UV exposure. Dome-shaped or rectangular designs are common for outdoor use .
