

Fiber distribution box connected to the junction box

Article Overview

A Fiber Distribution Box (Terminal Box) is for end-user fiber termination and distribution, while a Junction Box is for mid-span splicing and branching in outdoor or high-capacity networks.

Fiber Distribution (Terminal) Box

Purpose and Function: A Fiber Distribution Box, also called a Fiber Terminal Box or Optical Distribution Box, is primarily used at the end of the optical network to manage and distribute fiber optic signals to individual users or devices. It provides a secure location for terminating incoming feeder cables, splicing fibers, and connecting them to outgoing drop cables via adapters and pigtails . **Key Features:**

- **Adapter Plates/Ports:** Supports SC, LC, or other standard fiber connectors for plug-and-play connections.
- **Splice Trays:** Organizes and protects fiber splices (fusion or mechanical).
- **Cable Entry/Exit Ports:** Ensures neat entry and strain relief for feeder and drop cables.
- **Fiber Storage:** Manages excess fiber length to prevent damage.
- **Protective Enclosure:** Shields fibers from dust, moisture, and physical damage.

Applications:

- FTTH (Fiber to the Home) and FTTB (Fiber to the Building) networks.
- Indoor or outdoor wall-mounted, pole-mounted, or rack-mounted installations.
- Small-scale distribution for residential or office environments ...
