

Fiber optic cable sold for copper

Article Overview

Surplus fiber optic cables can be sold or traded, often through specialized buyers, distributors, or consignment services, though their value differs from copper due to material and market factors.

Understanding Fiber vs Copper Value

Fiber optic cables are made of glass or silica and transmit data using light, whereas copper cables transmit electrical signals. Fiber offers higher bandwidth, longer transmission distances, and immunity to electromagnetic interference, making it more valuable for modern networks, but it is not directly interchangeable with copper in terms of material resale value. Copper, being a metal, has intrinsic scrap value, whereas fiber's value is primarily in its functionality and resale as a network product.

Selling Surplus Fiber Optic Cable

Companies and individuals with excess fiber optic cables can sell them through specialized buyers or distributors. Services like Discount Fiber purchase surplus fiber optic cables from manufacturers, distributors, resellers, and end users. They accept new, unused, or first-quality cables, including indoor, outdoor, singlemode, multimode, hybrid, and tactical fiber types. Sellers typically provide details such as brand, type, quantity, and condition to receive an offer.

Trade or Consignment Options

Some buyers offer consignment services, where your surplus fiber is sold on your b...
