

Fiber optic connector cannot connect to router

Article Overview

A fiber optic interface may fail to connect to a router due to incorrect setup, missing configuration, or ISP-related issues.

Check Hardware and Connections

- **Verify the Optical Network Terminal (ONT):** Most fiber connections require an ONT provided by your ISP, which converts optical signals into electrical signals your router can use . Ensure it is powered on and the status lights are stable.
- **Confirm Router Compatibility:** Your router must support fiber input, typically via an SFP or WAN port labeled "ONT" or "Fiber" .
- **Inspect Fiber Cables:** Use the correct fiber optic cable type (SC/APC or SC/UPC) and ensure connectors are clean and properly seated .
- **Ethernet Link:** Connect the ONT's Ethernet/LAN port to your router's WAN port using a high-quality Ethernet cable .

Verify Router Configuration

- **IP Settings:** Some ISPs require a static IP, while others use dynamic IP or PPPoE credentials. Incorrect IP configuration can prevent connectivity .
- **PPPoE Credentials:** If your ISP uses PPPoE, ensure you have the correct username and password entered in the router settings .
- **MAC Address:** Some ISPs bind service to a specific MAC address. Clone the ONT's MAC address in your router if necessary
