

Fiber optic router is not working

Article Overview

A fiber optic router may stop working due to issues with the router, ONT, fiber cables, or service outages, and systematic troubleshooting can often restore connectivity.

Step 1: Check Power and Connections

Ensure that both your Optical Network Terminal (ONT) and router are powered on. Unplug them, wait about 30 seconds, and then plug them back in, starting with the ONT before the router to allow proper initialization . Inspect all fiber and Ethernet cables for visible damage, kinks, or loose connections, as even minor bends can disrupt the signal .

Step 2: Inspect Indicator Lights

Check the LED indicators on your ONT and router. A “LOS” (Loss of Signal) light or unusual blinking patterns can indicate connectivity issues or hardware faults . Refer to your device manual to interpret the lights correctly.

Step 3: Clean Fiber Connectors

Fiber optic connectors are sensitive to dust and oil. Use lint-free wipes and isopropyl alcohol to clean the connectors, as contamination can cause signal loss or intermittent connectivity .

Step 4: Test Hardware...
