

Flame-retardant fiberglass cable tray parameters and specifications

Article Overview

Flame-retardant fiberglass cable trays are designed to meet fire safety, mechanical, and corrosion resistance standards, typically following IS 6746-1994 and UL94 V-0 ratings.

Material and Resin Standards

FRP cable trays are made from fiberglass reinforced plastic, combining glass fibers with resin matrices such as unsaturated polyester (FR-P) or vinyl ester (FR-VE). These resins are formulated to be fire retardant, providing resistance to ignition and flame spread while maintaining structural integrity in corrosive environments . The IS 6746-1994 standard specifies the requirements for unsaturated polyester resin systems used in low-pressure fiber-reinforced plastics, including mechanical strength, dimensional tolerances, and chemical resistance .

Fire Performance Standards

Flame-retardant FRP trays are tested for flammability, smoke production, and toxic gas emissions. Common fire performance standards include UL94 V-0, which ensures that the material self-extinguishes quickly and does not propagate flames . Fire resistance testing evaluates burn duration, flame spread, and smoke/toxic gas generation, ensuring that cable trays do not become fire hazards in industrial or commercial installations
