

# Guyana Distribution Box Size Requirements

## Article Overview

Distribution boxes in Guyana must meet specific dimensional, material, and safety standards, with sizes varying by type and application.

### General Specifications

In Guyana, low-tension (L.T.) distribution boxes are typically fabricated from 2 mm galvanized iron (GI) sheet steel and reinforced with suitable channels for structural stability and mounting handles . The boxes are designed for outdoor use and must comply with the National Electrical Code (NEC) and local safety regulations .

### Dimensions and Mounting

The exact length, width, and height of distribution boxes depend on the model and application. Standard tables provide dimensions for various types, including residential, commercial, and industrial boxes. For example, the YBF series wind power box-type substations have specific length and width dimensions tailored for wind power generation, but similar sizing principles apply to general distribution boxes .

### Explosion-Proof and Specialized Boxes

For hazardous environments, explosion-proof distribution boxes are available. These enclosures are certified Ex d IIB+H2 and Ex tb, suitable for Zone 1 & 2 (gas) and Zone 21 & 22 (dust) . They include features such as built-in circuit breakers, explosion-pr...
