

How many megabits per second does a fiber optic router offer

Article Overview

Fiber optic routers typically support speeds ranging from 300 Mbps to 10 Gbps, depending on the plan, hardware, and network setup.

Typical Residential Speeds

For most home users, fiber optic internet plans start at 300 Mbps symmetric, with common tiers including 500 Mbps, 1 Gbps, 2 Gbps, and 5 Gbps. A few providers offer 10 Gbps residential service, though availability is limited and often more expensive . These speeds are symmetric, meaning upload and download rates are equal, which is a key advantage over cable or DSL connections .

Enterprise and High-Capacity Fiber

Enterprise-grade fiber, especially using single-mode fiber (SMF) with technologies like Dense Wavelength Division Multiplexing (DWDM), can support speeds of 100 Gbps or higher, with theoretical capacities reaching terabits per second under optimal conditions . Multimode fiber (MMF) is typically used for shorter distances and supports lower speeds due to modal dispersion .

Hardware Considerations

The actual speed a router can deliver depends on its WAN port and internal processing power. Standard consumer routers with 1 Gbps Ethernet ports can cap t...
