

How many meters of cable tray span in South Sudan

Article Overview

There is no publicly available data specifying the total meters of cable tray installed in South Sudan.

South Sudan's electrical infrastructure is extremely limited, with only about 1% of the population having access to electricity and per capita consumption estimated at roughly 80 kWh as of 2010 . This indicates that large-scale cable tray installations are likely minimal. Cable trays are available for purchase in South Sudan through local suppliers, but the extent of their deployment in commercial or industrial projects is not documented .

Typical Cable Tray Span

For reference, cable trays generally span between 6 to 24 feet (approximately 1.8 to 7.3 meters) without additional support, depending on factors such as cable weight, tray type, and installation method . Heavier cables or solid-bottom trays require shorter spans, while lighter cables or ladder-type trays can span longer distances. Proper installation and adherence to standards are crucial to maintain structural integrity.

Standards and Guidelines

While South Sudan does not have widely published national standards for cable tray installation, many countries follow IEC 61537 or similar regional standards for design...
