

How much does a pure electric optical cable traction machine cost

Article Overview

The cost of a pure electric optical cable traction machine typically ranges from \$2,000 to \$15,000 or more, depending on capacity, features, and supplier.

Price Range and Factors

Electric optical cable traction machines vary widely in price based on their pulling capacity, automation level, and additional features. Smaller, basic models suitable for short-distance or low-capacity cable pulling may start around \$2,000–\$5,000. Larger, fully automated machines capable of handling long-distance, high-core-count cables can cost \$10,000–\$15,000 or higher . Key factors influencing cost include:

- Traction capacity: Machines designed for heavier or larger-diameter cables require stronger motors and reinforced structures, increasing price .
- Automation features: Automatic threading, cable tension control, and overhead or buried cable handling add to the cost .
- Build quality and certifications: CE-certified machines with overload, overvoltage, and short-circuit protection are generally more expensive .
- Supplier and shipping: Machines sourced from international suppliers may include shipping, customs, and import fees, affecting the final cost .

Typical Applications

These machines are used for:...
