

How much subsidy is there for photovoltaic distribution boxes in Africa

Article Overview

Subsidies for photovoltaic distribution boxes in Africa are generally limited, with most support coming from targeted tax incentives, municipal programs, or financing schemes rather than widespread direct subsidies.

Overview of Subsidy Landscape

In most African countries, direct government subsidies for PV systems, including distribution boxes, are minimal or non-existent. Distributed solar adoption has largely grown organically, driven by the need for reliable electricity in areas with frequent outages rather than through financial incentives. Countries like South Africa, Namibia, and Kenya have seen rapid growth in distributed solar, but this expansion is mostly market-driven rather than subsidy-driven.

South Africa Example

South Africa provides some tax incentives and municipal support for solar PV systems, which can indirectly benefit distribution components:

- Section 12B of the Income Tax Act allows businesses to deduct 100% of the cost of qualifying solar PV systems in the first year of installation.
- Residential tax rebates were offered in 2023 (25% of the cost, up to R15,000) for solar panels, though this incentive expired in February 2024 and has not been renewed
