

How to configure a fiber optic cable with a programmable switch

Article Overview

To configure a fiber optic cable with a programmable switch, you need to select compatible SFP modules, connect duplex fiber cables correctly, and configure the switch ports and VLANs for proper operation.

Step 1: Select the Appropriate Fiber and SFP Modules

- Determine whether your network requires single-mode (OS2) for long distances or multimode (OM3/OM4) for shorter runs .
- Choose SFP or SFP+ transceivers that match the switch's port speed (1G for SFP, 10G for SFP+, QSFP for higher bandwidth), .
- Ensure the SFP modules are compatible with the fiber type and connector style, typically LC duplex connectors .

Step 2: Connect the Fiber Optic Cable

- Use duplex fiber cables with two strands: one for transmitting (TX) and one for receiving (RX), .
- Connect the fiber so that TX on one switch goes to RX on the other, and vice versa .
- If using pre-terminated cables, verify the connectors match the SFP modules. For direct attach cables (DACs), ensure both ends are compatible with the switch ports .

Step 3: Configure the Switch Ports...
