

How to connect a router to a fiber optic cable box

Article Overview

To connect a router to a fiber optic box, you need an Optical Network Terminal (ONT) to convert the fiber signal, then link it to your router via an Ethernet cable.

Required Equipment

- Optical Network Terminal (ONT): Provided by your ISP, it converts the incoming fiber optic signal into an electrical signal your router can use .
- Fiber optic cable: Usually a thin yellow cable with SC/APC or SC/UPC connectors .
- Router: Ensure it has a WAN or Internet port compatible with Ethernet input .
- Ethernet cable: Cat6 or higher is recommended for high-speed connections .
- Power adapters for both the ONT and router.

Step-by-Step Connection

- Locate the fiber optic wall outlet where the ISP's fiber line enters your home .
- Connect the fiber optic cable from the wall outlet to the ONT's optical input port. Handle the cable carefully to avoid damage, and remove protective caps before connecting .
- Power on the ONT and wait for the status lights to stabilize, which may take 2-5 minutes .
- Connect the Ethernet cable from the ONT's LAN or Ethernet port to the router's WAN/Internet port .
- Power on the router and wait for the indicator lights to confirm a successful connection
