

How to connect outdoor network cable fiber optic cable to a router

Article Overview

You connect an outdoor fiber optic cable to a router by first linking it to an Optical Network Terminal (ONT), which converts the optical signal into an electrical signal, and then connecting the ONT to your router via Ethernet.

Step 1: Gather Necessary Equipment

- Optical Network Terminal (ONT): Provided by your ISP, this device converts light signals from the fiber into electrical signals your router can use .
- Fiber Optic Cable: Typically single-mode with SC/APC or SC/UPC connectors .
- Fiber-Ready Router: Ensure it has a WAN port or SFP slot compatible with your ONT .
- Ethernet Cable: Cat6a or higher is recommended to maintain high-speed performance .

Step 2: Install the ONT

- Locate the fiber entry point in your home or building.
- Connect the outdoor fiber optic cable to the ONT's optical input port. Handle the fiber connector carefully, avoiding contact with the glass tip and removing protective caps before insertion .
- Position the ONT near a power outlet and in a dry, ventilated area.
- Power on the ONT and wait for the status lights to stabilize, indicating a successful connection to your ISP
