

How to install cable clamps for cable trays

Article Overview

Cable clamps inside cable trays are installed by selecting the correct clamp size, positioning it around the cable, and securing it to the tray using screws, rivets, or adhesive, ensuring proper spacing and support.

Step 1: Plan and Prepare

Before installation, plan the cable route and determine the number of clamps needed based on cable type, size, and tray length. Ensure the tray is properly mounted and level, with supports spaced according to load requirements, typically 1.5 to 3 meters apart for standard trays . Gather tools such as screwdrivers, drills, screws, rivets, washers, and measuring tools .

Step 2: Choose the Right Clamp

Select a clamp type and size suitable for your cable diameter. Common options include P-clamps, adhesive-backed clips, and rivet-mounted clamps. The clamp should be snug around the cable without crushing it .

Step 3: Position the Clamp

Place the clamp around the cable or cable bundle and align it with the tray's mounting surface. For ladder-type trays, position the clamp around the siderail or rung, ensuring it does not interfere with other cables or tray components
