

# How to remake a fiber optic pigtail

## Article Overview

Remaking a fiber optic pigtail involves preparing the fiber, performing a precise fusion or mechanical splice, and testing the connection to ensure low signal loss.

### Step 1: Gather Tools and Materials

To remake a fiber optic pigtail, you will need:

- Fiber cleaver for precise cutting
- Fusion splicer (or mechanical splice kit)
- Fiber stripper to remove the outer jacket and buffer
- Isopropyl alcohol wipes for cleaning
- Replacement pigtail with a factory-terminated connector
- Patch cords and adapters for testing connections

### Step 2: Prepare the Fiber

- Strip the fiber: Remove the outer jacket and buffer carefully without nicking the glass core.
- Clean the fiber: Use alcohol wipes to remove dust and debris from the bare fiber.
- Cleave the fiber: Use a fiber cleaver to create a flat, smooth end for splicing. Proper cleaving is critical to minimize signal loss .

### Step 3: Splice the Pigtail

- Fusion splicing: Align the bare end of the pigtail with the prepared fiber in a fusion splicer. The splicer will fuse the fibers together using an electric arc, creating a per...
