

How to remove the PON optical module

Overview

Removing the SFP PON Module: Pull the optical fiber cable out of the module's socket. Pull the module out of the device's socket and insert the black protective cap back into the module for. Therefore, this article introduces you to a small guide to the installation and removal of optical modules to ensure that you can operate them correctly and avoid unnecessary damage or malfunctions. Preparation Before Installation 1. Product Inspection Whether the packaging is in an anti-static bag. The display `epon-info interface pon` command displays information about an Ethernet passive optical network (EPON) interface. All views 1: Monitoring level You can use this command to check the attributes of. Push the module with light pressure into a free SFP slot of the device. 953 Gbps XGS-PON interface to the supporting system. The Cisco PON OLT is compatible with various Optical Network Terminals (ONTs) on the market, provided they adhere to the ONU Management and Control Interface (OMCI) standard.
