

How to secure a switch in a network cabinet

Article Overview

Securing a network switch requires both physical protection in a locked cabinet and robust network security configurations to prevent unauthorized access and cyber threats.

Physical Security

- **Lock the Cabinet:** Place switches in a locked network cabinet or rack to prevent unauthorized physical access. Use electronic locks if possible and integrate them with building access control systems for consistent authentication across doors and cabinets .
- **Control Access:** Only authorized personnel should have access to the cabinet. Maintain audit trails and real-time monitoring to detect tampering or unauthorized entry .
- **Organize and Protect Cables:** Proper cable management reduces accidental disconnections and makes it harder for intruders to manipulate connections .
- **Redundant Power:** Ensure switches have backup power or PoE redundancy to maintain uptime during disruptions .

Network Security

- **Use Strong Authentication:** Configure strong, unique passwords for all accounts and disable default credentials. Implement role-based access control (RBAC) and AAA (Authentication, Authorization, Accounting) with RADIUS or TACACS+ for centralized...
