

How to take out and use the fiber optic router

Article Overview

To safely remove and use a fiber optic router, handle the fiber cables and transceivers carefully, follow proper disconnection steps, and reconnect using an Optical Network Terminal (ONT) and Ethernet link.

Safety Precautions

Fiber optic equipment transmits data using laser light, which can damage your eyes. Never look directly into fiber-optic transceivers or cable ends, and always use the provided rubber safety caps to cover connectors when disconnected. Avoid bending fiber cables beyond their minimum bend radius, as this can damage the glass fibers and disrupt signals. Use an ESD wrist strap to prevent static discharge when handling transceivers or router components .

Removing the Fiber Optic Router or Components

- Power Down (Optional for Home Routers): While many transceivers are hot-swappable, turning off the router and ONT can prevent accidental damage.
- Label Cables: Mark each fiber or Ethernet cable to ensure correct reconnection later .
- Disconnect Fiber Cables: Carefully unplug the fiber-optic cable from the transceiver or ONT port. Cover the cable end with a rubber safety cap immediately .
- Remove Transceivers (if applicable): Open the ejector lever fully until it clicks, then gently pull the transceiver out. Place it on an antistatic surface or in an electrostatic bag
