

How to use an automatic fiber optic cable cutting tool

Article Overview

Automatic fiber optic cable cutting tools provide precise, efficient, and repeatable cuts for various fiber types, reducing manual effort and improving production or installation quality.

Overview

Automatic fiber optic cable cutting tools are designed to cut and strip fiber optic cables quickly and accurately with minimal operator intervention. They are widely used in manufacturing facilities, research labs, data centers, and field installations where precision and efficiency are critical . These tools can handle a variety of fiber types, including loose-tube, tight-buffered, flat, ribbon, and single fibers, and are suitable for both short and long cable lengths .

Key Features

- **Fully Automated Operation:** Many tools start cutting automatically when the lid is closed, reducing manual steps and increasing speed .
- **High Precision Cutting:** Cleaving angles are typically $\leq 0.5^\circ$, ensuring clean, low-loss fiber ends for optimal splicing .
- **Versatile Cable Support:** Tools often accommodate multiple fiber diameters, from bare fibers (0.25mm) to coated fibers (0.9mm) and larger cables (2.5–3.0mm), .
- **Durable Blades:** Tungsten steel or hardened blades provide long-lasting performance, supporting thousands of cuts before replacement
