

How to wire switch cabinets

Article Overview

Wiring a switch cabinet involves careful planning, proper placement of protective devices, terminals, and safe routing of wires to ensure functionality and compliance with electrical standards.

Planning and Preparation

Before starting, gather all necessary components: protective devices (circuit breakers, RCDs), KNX or control devices, neutral (N) and protective (PE) strips, terminals, and appropriate cables. Sketch the cabinet layout to determine the placement of devices and wiring paths. Leave about 30% extra space for future expansion or modifications.

Installing Components

- **Terminals:** Install in the upper part of the cabinet or on designated rails. Connect neutral wires to the N strip and protective earth wires to the PE strip, usually on the left side.
- **Protective Devices:** Place circuit breakers and residual current devices under the terminals. For three-phase circuits, install RCDs on the right side of the cabinet.
- **Control Devices:** KNX modules or UPS equipment should be installed at the bottom of the cabinet for easy access and ventilation.

Wiring Techniques

- **Routing Wires:** Use proper conduits such as EMT or PVC tubing to route wires neat...
