

Huawei GPON optical modules come in several types

Overview

Huawei offers multiple GPON XG-PON XGS-PON & 50G-PON optical module options, including Class B+, Class C+, Class C+ Pro, and Class D optics. Ensure that the optical power is not overloaded. 1 Gbit/s and downlink service bandwidth is 2. Widely deployed by Internet Service Providers (ISPs), telecom operators, FTTH service providers, and enterprise network operators, these optical modules enable. GPON optical module, also known as GPON SFP transceiver, is a small and pluggable module that plays a critical role in Gigabit Passive Optical Networks (GPON). It converts electrical signals into optical signals over fiber optic cables in the GPON network. These modules are typically installed in Optical Line Terminals (OLTs) at the service provider's central office and Optical Network Units (ONUs) or Optical Network. Up to date, more than 100 operators have released Gigabit services, and more than 30 operators have released 10G PON services. As various regions differ much in broadband development conditions, construction costs, and equipment costs, GPON is still required in many parts of the world.
