

Huawei fiber optic cable can be used as a router

Article Overview

Huawei fiber optic systems, such as FTTR and ONT devices, can function as routers, providing Wi-Fi, Ethernet, and network management capabilities.

Huawei FTTR (Fiber to the Room)

Huawei's FTTR solution extends fiber optic cables directly to rooms in a home or office, replacing traditional copper or Ethernet cabling. The OptiXstar V166a20 and similar FTTR main devices act as Wi-Fi routers, offering 2.5 Gbit/s and 1 Gbit/s Ethernet ports, and can connect to distribution boxes that serve as access points in different rooms. These access points form a mesh Wi-Fi network, ensuring devices automatically connect to the strongest signal without bandwidth loss, unlike traditional Wi-Fi repeaters. The system supports multiple distribution boxes, allowing up to 16 access points for large homes or offices. Huawei's FTTR cables are pre-terminated, flat, and easy to route along baseboards or under doors, making installation convenient.

Huawei ONT Routers

Huawei also offers ONT (Optical Network Terminal) routers, which convert optical signals from fiber into electrical signals for home or office networks. Many ONT models, such as the HG8245H or HG8145V5, integrate routing functionality, Wi-Fi, and Ethernet ports, effectively serving as both a fiber interface and a network router. These devices are commonly used in FTTH (Fiber to the Home) setups and can han...
