

Huijue Fiber Optic Distribution Frame Fiber Optic Patch

Article Overview

Huijue Fiber Optic Distribution Frames (ODFs) and Patch Panels provide organized, secure, and scalable management for fiber optic networks.

Overview of Huijue Fiber Optic Distribution Frames (ODFs)

Huijue's Fiber Optic Distribution Frames (ODFs) are specialized enclosures designed to manage, terminate, splice, and distribute fiber optic cables efficiently. They act as the central hub in a fiber network, connecting external trunk cables to distribution cables and active equipment like switches and routers. Key functions include:

- Termination: Fibers from external cables are terminated into connectors such as SC, LC, ST, or MPO/MTP.
- Splicing: Fibers can be joined via fusion or mechanical splicing, with splices protected in trays.
- Patching: Patch cords allow flexible routing between terminated fibers and network devices.
- Distribution: Fibers are routed to final destinations, supporting both LAN and FTTH networks. ODFs simplify maintenance, fault detection, and network upgrades while protecting delicate fibers from dust, moisture, and physical stress.

Features of Huijue Fiber Optic Patch Panels

Huijue's Fiber Optic Patch Panels complement ODFs by providing a structured interface for fiber connections. Key features include:

- Rack and Wall Mount Options: Available in 1U, 2U, 3U, and 4U rack units or compact wall-mounted designs.
- Sliding Drawer Mechanism: Allows easy access to splice trays and back-side cabling without removing the panel from the rack.
- Versatile Adapter Compatibility: Supports SC, LC, FC, ST, and MPO/MTP connectors.
- Robust Construction: Made from cold-rolled steel with electrostatic spraying for durability and impact protection.
- High-Density Management: Suitable for data centers, telecom exchanges, and campus networks, ensuring organized cabling and easy maintenance.
